CAREER OBJECTIVE

Aspiring Full Stack Developer (MERN) seeking a software engineering role to apply my skills in React, Node.js, and MongoDB on real-world products. Passionate about building reliable, user-focused web applications and eager to contribute to a collaborative engineering team while growing under experienced mentors.

EXPERIENCE

Winter Intern *Dec 2024 – Jan 2025 IIT Ropar | Top Performer among 50+ interns*

Tech: React.js, Node.js, MongoDB, Express.js, REST APIs, Git

Project Link: [GitHub Repository](#)

- Completed a one-month hands-on internship with practical exposure to **MERN Stack** development, API integration and performance optimization.
- Improved debugging efficiency by refactoring the codebase using modular design patterns and resolving defects across multiple review cycles.
- Prototyped an attention-tracking web application during IIT Ropar’s Winterthon (16-hour hackathon) to detect student engagement using mouse movement, scroll activity, and keyboard interaction patterns without collecting biometric data.
- Recognised as a **Top Performer** for consistent project delivery, clean and maintainable code practices, high-quality documentation, and effective cross-functional teams.

PROJECTS

OffGridLink — Offline-First P2P File Sharing System *2026*

Tech: PeerJS, WebRTC, WebTorrent, PouchDB, CouchDB

Project Link: [GitHub Repository](#)

- Architected zero-server-dependency P2P file sharing enabling **200MB+ transfers** over LAN/WiFi via WebRTC data channels and WebTorrent magnet URIs.
- Engineered offline-first persistence with PouchDB and bi-directional CouchDB sync ensuring **zero data loss** across network disruptions.
- Built quiz distribution module with offline sharing, local submission storage, and seamless online sync — eliminating **100%** centralised infrastructure dependency.

Thanglish Multiplayer Typing Game — Real-time Competitive Typing Platform *2025*

Tech: React.js, Supabase Realtime, PostgreSQL, Tailwind CSS, Vercel

Project Link: [GitHub Repository](#)

- Engineered a **real-time multiplayer typing game** supporting **10 concurrent players** using Supabase Realtime (WebSocket pub/sub) with live progress bars and per-player WPM tracking.
- Optimized **React rendering performance** using `useMemo`, functional `useState`, and CSS compositor animations — reducing UI lag during active typing.
- Implemented **cross-device progress persistence** using Supabase PostgreSQL with username-based sync for player stats and achievements.
- Built a **full-stack typing platform** featuring multiple UI themes, global leaderboard, WPM analytics, and achievement system — deployed on Vercel with CI/CD.

SKILLS

Languages: Java, JavaScript (ES6+), Python, HTML5, CSS3, SQL

Frameworks & Tools: React.js, Node.js, Express.js, Tailwind CSS, REST APIs, Git, GitHub, Postman, VS Code

Databases: MongoDB, MySQL, PouchDB, CouchDB

Concepts: Data Structures & Algorithms, OOP, DBMS, OS, SDLC, WebRTC, WebTorrent, IoT

EDUCATION

B.Tech — Information Technology *2023 – 2027*

Sona College of Technology, Salem *CGPA: 8.58 / 10*

HSC (12th Grade) *2021 – 2023*

Bharathiyar Matric HSS *Percentage: 90%*

CERTIFICATIONS & ACHIEVEMENTS

- NPTEL:** Java Programming — 91% | Introduction to IoT — 87% | Design Thinking — 79%
- Competitions:** Techathon 2nd Round Qualifier | IEI Finalist | Code-Z Runner-Up
- CP & Hackathons:** 250+ LeetCode problems | ICPC Participant | Smart India Hackathon (SIH 2023)
- Appreciation Award (2023, 2024) | Active open-source contributor on GitHub
